The polypeptides and polymucleotides encoding them have cytostatic activity and can be used in vaccines and in gene therapy. The polypeptides and polymucleotides encoding them, antigen presenting cells which express the polypeptides and vaccines comprising them can be used for inhibiting the development of prostate cancer in a patient. The polypeptides can be used to generate antibodies or antidictypic antibodies for passive immuno therapy. A portion of the polypeptides can be used as a probe or modulate the expression of the polypeptides can be used as a probe or to modulate the expression of the polypeptides. The invention is useful for inhibiting the development of prostate cancer in a patient. The invention is also useful as markers for diagnosing prostate cancer and for monitoring diseases progression in patients. The present nucleic acid sequence represents a DNA sequence that is part of a gene encoding a human prostate tumour protein

The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the antibodies are also used in the detection of cancer in a patient. (I) and (II) can be used in vaccines. The antibodies or III can be used in vaccines. The antibodies or (II) can be used for monitoring the progression of cancer in a patient. (I) and (II) can be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate polynucleotide and anino acid sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

The invention relates to isolated prostate-specific polynucleotides, polypeptides, fusion proteins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting cells expressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating and immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The polygoucleotide is useful for detecting cancer. The polygoucleotide is useful for detecting cancer. The polygoucleotide is useful for detecting cancer. The prostate specific polynucleotide of the invention

AAH02528; 14-JUN-2001 (first entry) Prostate tumour antigen determined full length CDNA sequence for F1-12. Human; prostate tumour antigen; prostate tumour; therapy; diagnosis; prostate cancer; immunogenic; cytostatic; vaccine; ss. Homo sapiens. WO200125272-A2. 12-APR-2001. 04-OCT-1999; 99US-0157455P. (CORI-) CORIXA CORP. Xu J, Skeiky YAW, Reed SG, Cheever MA; WPI; 2001-245062/25. P-PSDB; AAB74798. Prostate specific protein and its encoding polynucleotide, useful for the treatment and diagnosis of prostate cancer. Claim 4; Page 153; 276pp; English. The present invention describes an isolated polypeptide (I) comprising at least an immunogenic portion of a prostate tumour antigen protein or its	variant. (I) have cytostatic activity and can be used in vacture production. (I), prostate tumour antigen polymucleotides, an antigen presenting cell (APC e.g. a dendritic cell) that expresses (I), and a pharmaceutical composition containing (I) are useful for inhibiting the development of cancer in a patient. Antibodies specific for prostate

                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                 The present invention describes an isolated polypeptide (P1) comprising at least an immunogenic portion of a prostate-specific protein, or its variant. Also described are polymucleotides (N1) encoding (P1). (P1) and (N1) have cytostatic activity and can be used in vaccine production. The polypeptides, nucleic acids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. Prostate specific genes P704P, P774P, P775P and 8305D are located in a genomic region on chromosome 22q11.2 known as the Cat Eye Syndrome region. PAH84G71 to AAH85143 and AAG99000 to AAG99077 represent polymucleotide and polypeptide sequences used in the exemplification of the present

The invention relates to a method of detecting prostate cancer by contacting a biological sample from a patient with: (a) a binding agent that binds to a polypeptide having an immunogenic portion of a prostate protein or its variant; (b) 2 oligomucleotide primers, where 1 of the oligomucleotides is specific for a DNA encoding the polypeptide of (a); or (c) an oligomucleotide probe specific for a DNA encoding the polypeptide of (a). The method and polypeptides are useful for diagnosing, treating, particularly by immunotherapy, monitoring the progression, and inhibiting the development of prostate cancer in a patient. The polypeptides may be used to generate antibodies useful for the diagnosis and monitoring of prostate cancer. ABSS8350-ABSS8746 represent human prostate tumour CDNA sequences of the invention
                                                                                               Detecting prostate cancer comprises contacting a sample with an agent capable of binding to a polypeptide with an immunogenic portion of a prostate protein, oligonucleotide primers or a probe specific for DNA encoding the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1621 BP; 461 A; 330 C; 412 G; 418 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to

The invention relates to an isolated polypeptide comprising no more than CC The invention relates to an isolated polypeptide comprising a sequence ADB14487. The peptides comprise a fragment ADB1363 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB1363 is a polypeptide encoded by a human prostate specific CDNA, one of 648 disclosed as new. Also included are nucleic acids encoding the proteins and peptides, expression vectors, a host cell cannot be proteined with the vector, an isolated antibody (or antigen binding fragment) that specifically binds to the protein or peptide, detecting a fragment) that specifically binds to the protein or peptide, detecting fragment) that specifically binds to the protein or peptide that binds to appearing as ADB1355, detecting the amount of polypeptide that binds to appearing as ADB1355, detecting the amount of polypeptide that binds to off value to determine the presence of cancer), a fusion protein comprising the presence of acontacting or expanding T cells with the appetides or protein comprising or expanding T cells with the peptides or protein comprising or expanding T cells with the peptides or the isolated T cell population, treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient the T cells proliferate, and administering the cancer in a patient. The peptides or antigen presente of cancer in a patient. The peptides (or an oligonuclectide that hybridiess to nucleic acid and administering che cancer in a patient. The peptides (or an oligonuclectide that hybridiess to nucleic acid are used to antigen contacting cells expressing the nucleic acid are used to cancer in a patient. The peptides, mucleic acid, are used to stimulate an immune response or treat presente of cancer in a patient. The peptides, mucleic acide, antibodies, fusion proteins, T cell populations or treat presenting cells are used to stim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 CTGTGCTATGGTCCTGGCTGACTTCGGGGCGCGTGGTACGCGTGGACCGGCCCCGGCTC 120

New polynucleotides encoding prostate specific polypeptides isolated a human prostate tumor cDNA library are useful to diagnose and treat cancer particularly prostate cancer

Example 1; SEQ ID NO 107; 99pp; English.

The invention relates to human prostate-specific polypeptides and the polynucleotides encoding them. The invention also relates to an isolated antibody or its antigen-binding fragment that specifically binds a polypeptide of the invention, a method of detecting cancer in a patient comprising contacting a biological sample of the patient with an agent that binds a prostate-specific polypeptide and comparing the amount of bound polypeptide comparated to a predetermined cut-off value and a fusion protein comprising a prostate-specific polypeptide. The sequences of the invention are used to diagnose and treat cancer, particularly prostate ancer. This sequence represents conding a human prostate-specific polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.

/note="Vector: pAMPI0; Site_1: Not1; Site_2: EcoRI; 1st strand cDNA was primed with Oligo (d7)17 on 50 ng of DNAse-treated, total cellular RNA obtained from DNAse-treated, total cellular RNA obtained from prostate epithelial cells. Double-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the CDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pAMP10 by the UDG-cloning method [Life Technologies]. Average insert size is 600 bp. NOTE: Not directionally cloned. This library was constructed by David Krizman."

Exrand cDNA was primed with oligo (dl)17 on 50 ng of
BNAse-treated, total cellular RNA obtained from
5,000-10,000 microdissected, histologically normal
prostate epithelial cells. Double-stranded cDNA was
ligated to EcoRI adaptors, 5 cycles of PCR applied to the
CDNA with an adaptor-specific primer, and the resulting
PCR product subcloned into pAMP10 by the UDG-cloning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             297

/not="Vector: pAMP10; Site_1: Not1; Site_2: ECORI; 1st
strand CDNA was primed with oligo(dT)17 on 50 ng of
DNAse-treated, total cellular RNA obtained from
5,000-10,000 microdissected, histologically normal
prostate epithelial cells. Double-stranded CDNA was
ligated to EcoRI adaptors, 5 cycles of PCR applied to the
CDNA with an adaptor-specific primer, and the resulting
PCR product subcloned into pAMP10 by the UGS-cloning
method (Life Technologies). Average insert size is 600
bp. NOTE: Not directionally cloned. This library was
constructed by David Krizman."

found through the I.M.A.G.E. Consortium/LLNL at:
www-bo.llnl.gov/bbpg/image/image.html
Seq primer: -28ml3 rev1 ET from Amersham
High quality sequence stop; 367.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /clone libe "NOT CGAP Prl"
/note="Vector: pAMP10; Site 1: Not1; Site 2: EcoRI; 1st
strand cDNA was primed with Oligo(dr)17 on 50 ng of
bNAse-treated, rotal cellular RNA obtained from
5,000-10,000 microdissected, histologically normal
prostate epithelial cells. Double-stranded cDNA was
ligated to EcoRI adaptors, 5 cycles of PCR applied to the
CDNA with an adaptor-specific primer, and the resulting
PCR product subcloned into pAMP10 by the UDG-cloning
method [Life Technologies). Average insert size is 600
bp. NOTE: Not directionally cloned. This library was
constructed by David Krizman."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      æ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GATCTGGTAGCAAA-GAAGAAAAAACAAACACTGATCTCTTTCTGCCACCCCTCTGA-CC 194

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308, A Sequence 308,
